Sabatti S.A.R. rifle

The Sabatti S.A.R. semi-automatic carbine matches the reliability of the popular AR-15 platform with the Sabatti quality: a new Made in Italy alternative for sport and professional uses

The Sabatti S.A.R. is a .223 Remington caliber versatile and reliable semi-automatic carbine, conceived around the AR-15 platform to offer passionate shooters all around the World a Made in Italy alternative on a market that's increasingly hungry for what is universally known as the quintessential modern sporting rifle design.

The Sabatti S.A.R. semi-automatic carbine is built around forged, black hard-anodized Ergal 55 upper and lower receivers: entirely MIL-SPEC in design and construction, offering high levels of quality accuracy and compatibility with accessories and spare parts found on the market

The direct gas impingement system features a low-profile gas block protected by a full-length machined aluminum forearm, with M-LOK slots for mounting accessories. A full-length top Picatinny rail provides plenty of space for mounting iron sights, optics, and electro-optical aiming systems.

The Sabatti S.A.R. semi-automatic carbine adopts the control configuration typical of the MIL-SPEC AR-15/M4 design, with a magazine release button on the right side of the receiver, a manual safety and a hold open release button on the left side.

The carbine uses STANAG 4179 compliant magazines and is equipped with a single 10 rounds capacity magazine. The robust 6-lugs bolt and bolt carrier group are of high-quality steel, while the Recoil Buffer and buffer spring, the charging handle, forward assist device and the trigger pack are AR-15 standard, all of them compatible with aftermarket components.

The S.A.R. carbine's barrel is entirely manufactured in-house by Sabatti, using the best steel and cutting-edge technologies available in barrel-making. The barrel is 14.5" long and features a standard rifling with a 1:9" twist, with a standard birdcage flash hider installed on a ½" – 28 UNEF muzzle thread, easily interchangeable with other accessories.

Sabatti S.A.R. carbine comes with a standard M4-type pistol grip and a FAB Defense GL-CORE stock, adjustable on 6-positions and compatible with FAB Defense's CORE-CP clip-on adjustable cheek riser (not included).

Finishes	Black finish on all components

Company notes

The Sabatti family is active in the gun making industry since little less than 400 years. Passed down from father to son, from generation to generation, all the acquired experiences have not been lost, and are instead what today provides quality to the Sabatti production. Sabatti is a leader in the manufacturing of top-class rifle barrels, whose excellent performances make them highly appreciated all over the World, by gun manufactures as well as by the most demanding sport shooters and professionals.
Except for the stocks, all components of every Sabatti gun are manufactured inside the company, using the best available technologies and materials, and a “know-how” which quite few International companies can boast nowadays.
